This is the first office action for application number 09/910,655, System for Removably and Adjustably Mounting a Device on a Surface, filed on July 20, 2001.

Election/Restriction

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-9, drawn to a system for removably and adjustably mounting a device on a surface, classified in class 248, subclass 237.
- II. Claims 10-23, drawn to an apparatus for positioning a module on a surface, classified in class 52, subclass 173.3.
- III. Claims 24-30, drawn to method for installing one or more devices on a plurality of keepers located on a surface, classified in class 136, subclass 251.

The inventions are distinct, each from the other because of the following reasons:

Inventions II and I are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the subcombination has utility by itself or in other combinations. The subcombination has separate utility such as a system for mounting a slidably adjustable vehicle car seat to the floor of a vehicle.

Inventions III and II are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the product as claimed can be practiced with another materially different product such as a mount for machinery positioned on a floor.

Inventions III and I are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the combination as claimed does not require the particulars of the subcombination as claimed for patentability. The subcombination has separate utility such as a system for mounting a slidably adjustable vehicle car seat to the floor of a vehicle.
